AUSTRALIAN ENERGY REGULATOR

Gas Pipeline Operator
Part 10 Financial Reporting Template

This template is to be uploaded by a Gas Pipeline Operator to its website to fulfil its annual reporting obligations.
Basis of preparation document is to be uploaded alongside this financial template, providing assumptions, methodologies, and other relevant information.

Colour coding of input sheets:
Light Blue / Dark Blue = AER instructions / headings
Orange = Input cells
Grey = Not applicable/No inputs required

Leave coloured cells blank if no information exists - PLEASE DO NOT ENTER TEXT unless specifically requested to do so.
All dollar amounts are to be unrounded, and in nominal terms.

Service provider:	Epic Energy South Australia Pty Ltd
Australian business number:	54068599815
Pipeline name:	Moomba to Adelaide Pipeline System
Type of regulated pipeline:	Non-scheme pipeline
Reporting period start date:	1/07/2025
Reporting period end date:	30/06/2026
Publication date of this financial report:	30/11/2026
Reported information is current as at:	09/11/2026

Has any information in this template been amended since last published within this current reporting period?	No	Basis of preparation ID

Table 4.2 Pipeline details

Pipeline Name	Description

Contents

Part 10 Financial Reporting
Epic Energy South Australia Pty Ltd
Year ending 30/06/2026
Pipeline capital expenditure

Please report all historical expansions/extensions in table 4.1.2, regardless of value.
Please ensure all extensions/expansions in the next 12 months that have advanced to the "Final Investment Decision" stage are comprehensively reported in table 4.1.3.

Table 4.1.1: Capital expenditure greater than 5% of construction cost

Basis of Preparation ID	Description of works	Date recognised	Expenditure ($ nominal)
4.1.1CEGTOCC_D15:E4	Bi-directional expansion	30/06/2015	27,500,000
Total expenditure			27,500,000

Table 4.1.2: Historical expansions and extensions

Basis of Preparation ID	Description of works	Date recognised	Expenditure ($ nominal)
4.1.2HEAE_C47:E73	Snapper Point Lateral	30/06/2023	6,545,024
4.1.2HEAE_C47:E73	Bolivar Lateral	30/06/2023	9,280,873
Total expenditure			15,825,897

Table 4.1.3: Planned expansions and extensions of capacity

Basis of Preparation ID	Description of the matter	Proposed commissioning date, or a range of dates	Expected end date, or a range of dates	Facility's proposed nameplate rating, or the estimated likely range during affected period	Proposed expenditure (if available, required for publicly announced expansions)
				GJ/day	$ nominal
Total proposed expenditure					-

Part 10 Financial Reporting
Epic Energy South Australia Pty Ltd
Year ending 30/06/2026

Pricing template

All numbers are expressed in $nominal

Please input the percentages of asset value allocated to each services, and the indexes provided by AER. Please ensure to include any necessary explanation in the Basis of Preparation of the allocation methodologies, or if alternative index is used.
The cost-based pricing benchmarks is calculated based on three elements. The basic logics of the methodology would be explained in the handbook.

6.1 Inputs

Service provider inputs		AER inputs	
Description	Asset allocation to reptitive service	Description	%
	%		
Firm forward haul transportation service	81.96%	Average regulatory return on debt	5.71%
Backhaul service		Gearing	60%
Interruptible or as available transportation service	4.11%	Statutory tax rate	30%
Firm stand-alone compression service		Gamma	40%
Interruptible or as available stand-alone compression service		Average regulatory rate of return	6.34%
Park service			
Park and loan services	9.99%		
Capacity trading service			
In pipe trading service	3.19%		
Other	0.80%		
Total	100.00%		

6.2 Pricing benchmarks

		Fixed operating costs per unit	Return of capital per unit	Return on capital & Tax per unit	Total cost per unit	Measurement unit
Firm forward haul transportation service	Low	0.0450	0.1728	0.1951	0.4145	$/GJ/day of Pipeline MDQ
	High	0.3012	0.3312	0.3454	0.8807	
Backhaul service	Low	-	-	-	-	$/GJ/day of Pipeline MDQ
	High	-	-	-	-	
Interruptible or as available transportation service	Low	0.0036	0.0068	0.0116	0.0219	$/GJ/day of Pipeline MDQ
	High	0.0170	0.0187	0.0141	0.0499	
Firm stand-alone compression service	Low	-	-	-	-	$/GJ/day of Pipeline MDQ
	High	-	-	-	-	
Interruptible or as available stand-alone compression service	Low	-	-	-	-	$/GJ/day of Pipeline MDQ

Other	-	-	-	-	-	-	-	-	-

6.4 Calculation process

Fixed operating costs

2.1 Three estimates of opex per unit of capacity	Total costs less depreciation in Table 2.1.1	Direct costs less depreciation in Table 2.1.1	Capacity denominator (report period) *2	Total costs less depreciation in Table 2.1.1 per capacity denominator	Direct costs less depreciation in Table 2.1.1 per capacity denominator
Firm forward haul transportation service	26,070,494.0	3,940,881.4	86,566	0.30	0.05
Backhaul service	-	-	-	-	-
Interruptible or as available transportation service	1,382,308.5	193,837.0	75,218	0.02	0.00
Firm stand-alone compression service	-	-	-	-	-
Interruptible or as available stand-alone compression service	-	-	-	-	-
Park service	-	-	-	-	-
Park and loan services	2,607,079.7	424,460.7	41,808	0.07	0.01
Capacity trading service	-	-	-	-	-
In-pipe trading service	976,551.5	147,618.0	-	-	-
Other	62,399.5	9,432.9	-	-	-

Return on capital

29. Estimated remaining direct asset lives	Depreciable direct assets in Table 3.3.1 or 3.2.1	Estimated pre-existing direct asset depreciation	Estimated remaining asset life
Firm forward haul transportation service	241,920,684.9	15,697,063.6	95.0
Backhaul service	-	-	-
Interruptible or as available transportation service	11,864,940.2	742,075.5	95.0
Firm stand-alone compression service	-	-	-
Interruptible or as available stand-alone compression service	-	-	-
Park service	-	-	-
Park and loan services	26,925,217.4	1,624,395.1	95.0
Capacity trading service	-	-	-
Hinge trading service	9,060,992.5	565,133.7	95.0
Other	379,339.2	95,112.8	95.0

30-31. Depreciation on (total: direct and shared/direct) assets per unit of capacity	Total asset depreciation in Table 2.1.1	Direct asset depreciation in Table 2.1.1	Capacity denominator (report period) TJ	Total asset depreciation per capacity denominator	Direct asset depreciation per capacity denominator
Firm forward haul transportation service	16,479,438.4	15,045,748.1	86,595	0.19	0.17
Backhaul service	-	-	-	-	-
Interruptible or as available transportation service	810,597.2	740,043.4	75,218	0.01	0.01
Firm stand-alone compression service	-	-	-	-	-
Interruptible or as available stand-alone compression service	-	-	-	-	-
Park service	-	-	-	-	-
Park and loan services	1,774,951.2	1,620,533.1	41,808	0.04	0.04
Capacity trading service	-	-	-	-	-
Hinge trading service	617,288.7	563,581.4	-	-	-
Other	39,443.4	36,011.8	-	-	-

32. Estimated RCM depreciation per unit of capacity	Closing asset value based on Table 4.1	Estimated remaining asset life	Estimated yearly depreciation	Capacity denominator (report period) TJ	Depreciation of RCM asset value per capacity denominator
Firm forward haul transportation service	459,192,269.5	95.0	28,671,444.6	86,595	0.33
Backhaul service	-	-	-	-	-

Date	AER amendment#	Worksheet
28/04/2025	1	Cover
28/04/2025	2	1. Pipeline information
28/04/2025	3	2. Revenue and expenses

Table	Cell
	Column C, D, E, F, I, J, K
Table 1.1: Pipeline details	C16
Table 2.1: Statement of pipeline revenue and expenses by service	D12-D21, F12-F21

Change
adjust column width to allow more characters
change the format of cell C16 from “date” to “number”
update the formula

Reason
the restricted cell space precludes the complete display of service provider name
this cell currently displays # symbols instead of a number
#N/A in the cells cause the sum formula in cells D22/F22 to return an error

1. Pipeline information									
Table ID	Table Name	SoP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
1.1	Pipeline details	N/A - No reference in template	Pipeline Location and Length	Actual	NA	The Geographic Information System (GIS)	N/A	User-Access-Guide.pdf	N/A
1.1	Pipeline details	N/A - No reference in template	Number of Customers	Actual	NA	MS Dynamics NAV (customer records)	N/A	Customer data was produced from a Finance ERP report on GTA related customers for the relevant financial year.	N/A
1.1	Pipeline details	N/A - No reference in template	Service Type	Actual	NA	Published User Access Guide	N/A	User-Access-Guide.pdf	N/A
1.1	Pipeline details	N/A - No reference in template	Pipeline Nameplate Capacity	Actual	NA	MAPS Operational Information Summary.xlsx	N/A	Nameplate capacity is a function of the physical constraints of the asset (e.g. pipe size, compressor size, gas composition) and the nature of the commercial services delivered by the asset (e.g. steady flows vs intermittent periods of high flows).	N/A
1.1	Pipeline details	N/A - No reference in template	Construction Date	Actual	NA	S-00-099-TR-G-007 The Moomba/Adelaide Pipeline Manual	N/A		N/A
1.2	Pipeline services provided	N/A - No BoP Reference cells in the template	Pipeline services provided	Actual	NA	Microsoft Word - MAPS+Service+Information+Table (4).docx PypIT	N/A	The "MAPS Service Information" document discloses all services provided referencing PypIT contract information captured from agreements.	N/A

2. Revenue and expenses

An overview of the revenue generated from pipeline operations and the costs associated with the pipeline, published by pipeline services.

Table ID	Table Name	BoP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
2.1	Statement of pipeline revenue and expenses by service	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

2.1 Profit & loss statement by components

An overview of the revenue generated from pipeline operations and the costs associated with the pipeline, published by P&L components.

Table ID	Table Name	BoP ID	Item Name	Statement Period	Key Estimates	Source	Assurance	Reporting of	Additional Comments
2.1.1	Statement of pipeline revenues and expenses by component	2.1.1SOPRAEBC_013122	Direct revenue by pipeline	Actual	N/A	PypIT and Microsoft Dynamics NAV	None noted	**Total service revenue** Refer to table 2.2.1, which includes an explanation of how revenue is allocated to each category **Customer Contributions revenue** Refer BoP for explanation on "Customer contributions received" in table 2.3.1 **Government Contributions revenue** None **Profit from sale of fixed assets & Other direct revenue** Items reported in this category are based on the review of the Fixed Asset Register and general ledger. **Other indirect revenue** None **Reporting period – Amounts excluding related party transactions** No related party transactions exist, therefore all revenue has been reported within the 'Amount excluding related party transactions' column. EESA does not provide any transactions or direct services to its related parties. Related Parties are defined in line with AASB 124 and would include Power Assets located in separate entities	None Noted
2.1.1	Statement of pipeline revenues and expenses by component	2.1.1SOPRAEBC_024132	Direct expenses by pipeline	Actual	N/A	Microsoft Dynamics NAV/IBM Maximo	None noted	Costs are recorded and tracked in the financial information management systems maintained by the Service Provider. All costs are recorded by the legal entity that incurs the cost using a general ledger account associated with the nature of cost. Depending on the nature of the cost, additional information such as a project, asset or location associated with the cost will also be recorded. A Jet Report tool is utilised to extract the relevant cost data into the correct template category by referencing unique ledger accounts. These ledger accounts, identify specific pipeline costs based on location and cost type. **Direct costs - repairs and maintenance** These costs are directly attributable to the provision of services on the MAPS. Costs are recorded on work orders that include the pipeline asset or location associated with the work. This cost category includes the cost of dig up and repair activities on the MAPS as well as other preventative and corrective maintenance. **Direct costs - depreciation** Depreciation has been identified from the Fixed Asset Register maintained by the Service Provider as part of its financial information management systems. Depreciation relates to assets identified as directly relating to the MAPS in the statement of pipeline assets. **Direct costs - licence and regulatory costs** These costs have been identified from the financial information management systems as the direct cost of the Service Provider maintaining the MAPS pipeline licence. **Direct costs - other direct costs** Other direct costs include costs identified from the financial information management systems associated with assets identified as directly relating to the MAPS such as odorant and oils.	Refer to CAM
2.1.1	Statement of pipeline revenues and expenses by component	2.1.1SOPRAEBC_034134	Shared expenses by pipeline - employee expenses	Actual	N/A	Microsoft Dynamics NAV/external payroll provider reporting	None noted	Shared costs - employee costs These costs have been allocated to the MAPS using the following allocation method: Total employee related costs incurred by EESA include salaries, superannuation, employee benefits, training costs, incentive schemes and costs associated with working in remote areas such as roster flights and food. These costs have been included as shared costs – employee costs and then reduced by the following allocations: - The Service Provider maintains standard labour rates used to recover the cost of internal labour against work orders: - Employee costs associated with capital projects are removed based on time recorded against capital projects. These costs are included in the cost of pipeline assets. - Employee costs associated with work orders that relate directly to other assets or business activities have been removed. - Corporate staff costs who have roles that do not directly or indirectly relate to the provision of services on the MAPS have been excluded based on the roles and direct and indirect costs of employment. Finally, remaining employee costs have been allocated based on the ratio of capacity of pipelines owned and operated by the Service Provider. Capacity of Pipelines Ratio: The ratio of capacity of pipelines owned and operated by the Service Provider is calculated as: - Pipeline system capacity / (MAPS capacity + SEPS capacity) - Where MAPS capacity = 364 TJ/d (being 240TJ/d Southern Haul and 105TJ/d Northern Haul); and SEPS capacity = 9.5 TJ/d. The shared cost allocator is the most appropriate available allocator because it allows for costs to be allocated between MAPS and SEPS on a consistent basis that considers the difference in size, complexity and running costs of the two systems.	Refer to CAM
2.1.1	Statement of pipeline revenues and expenses by component	2.1.1SOPRAEBC_035135	Shared expenses by pipeline - information technology and communication costs	Actual	N/A	MS Dynamics NAV	None noted	**Shared costs - information technology and communication costs** Information technology and communication costs includes all costs associated with software licensing and support, networking and communication costs. It has been allocated based on the ratio of capacity of pipelines owned and operated by the Service Provider	Refer to CAM
2.1.2	Statement of pipeline revenues and expenses by component	2.1.1SOPRAEBC_037137	Shared expenses by pipeline - shared asset depreciation	Actual	N/A	MS Dynamics NAV	None noted	**Shared costs – shared asset depreciation** Shared asset depreciation has been identified from the Fixed Asset Register maintained by the Service Provider as part of its financial information management systems. Shared asset depreciation relates to assets identified as not directly relating to the MAPS or SEPS. A two-step approach has been taken to allocating shared asset depreciation to the MAPS in accordance with the principles set out in the Guidelines: •Motor vehicle depreciation has been allocated based on the time charged to the MAPS for maintenance activities relative to the time charged to the SEPS activities. This results in circa 2% of costs being allocated as not directly relating to the MAPS. •This shared cost allocator is the most appropriate available allocator because it is based on time records and is consistent with how internal labour costs have been allocated. •Other depreciation which relate to buildings and information communication and technology (ICT) assets has been allocated based on the ratio of capacity of pipelines owned and operated by the Service Provider.	Refer to CAM
2.1.3	Statement of pipeline revenues and expenses by component	2.1.1SOPRAEBC_042142	Shared expenses by pipeline - other shared costs	Actual	N/A	MS Dynamics NAV	None noted	**Shared costs - other shared costs** Other shared costs include costs not directly attributable to the provision of pipeline services. Other shared costs include consultants, audit and legal advice, the insurance programme and travel and related expenses. Other shared costs have been allocated to the MAPS using the following method: •EESA has Management Service Agreements in place with other legal entities in the Epic Group to provide defined services. EESA recovers the cost of providing these services from the other legal entities which results in a decrease to other shared costs. •All other shared costs have been allocated based on the ratio of capacity of pipelines owned and operated by the Service Provider.	Refer to CAM

2.2 Allocation to pipeline services
A breakdown of revenue and expenses by each pipeline services.

Table ID	Table Name	BoP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
2.2.1	Revenue by service	2.2.1RBS_D13:K23	Direct Revenue (excl. capital contributions)	Actual	N/A	PypIT and MS Dynamics NAV	N/A	Allocation to pipeline service & Amount excluding related party transactions Allocation to pipeline service and allocator methodology Each PypIT Revenue Service is directly attributable to a specific category of revenue based on the contract details and then assigned to a specific general ledger account within MS Dynamics Navision. Where Finance ERP account allocation requires better alignment to the template, particular invoice line items are flagged to ensure appropriate mapping. Each direct revenue line item's Allocation of Pipeline Service (%) is calculated as the revenue amount ($) per line item divided by the Total direct revenue amount ($). Allocator justification Numeric quantities of allocators are displayed in the reporting template. Other direct revenue Revenue items that are not sourced from PypIT do not relate to any of the standard categories shown in the template and are reported in the 'Other' Direct revenue category based on analysis of supporting Finance ERP records. Other Direct revenue includes miscellaneous revenue items such as Day Ahead Auction revenue, O&M agreements and various cost recoveries. Reporting period – Amounts excluding related party transactions There is no direct revenue sourced from related parties, therefore all revenue has been reported within the 'Amount excluding related party transactions' column.	NA
2.2.1	Revenue by service	2.2.1RBS_D25:K35	Capital Contributions	Actual	N/A	MS Dynamics NAV	N/A	**Allocation to pipeline service & Amount excluding related party transactions** **Allocator** Capital contributions were sourced from the Finance ERP general ledger and allocated to the 'Description' revenue category based on the Direct revenue allocator **Allocator justification**: Capital contributions utilise the Direct revenue allocator being the most appropriate where capital contributions are not attributable to a specific revenue category i.e. Customers who make capital contributions using multiple services. Numeric quantities of allocators are displayed in the reporting template. **Reporting period -Related party transactions** No Capital Contributions were sourced from related parties.	NA
2.2.1	Revenue by service	2.2.1RBS_D37:K49	Indirect revenue allocated	Actual	N/A	MS Dynamics NAV	N/A	No indirect revenue was reportable	NA
2.2.2	Expenses by service	2.2.2EBS_D56:K66	Total direct expenses (excl. depreciation)	Actual	Direct expenses and Shared expenses are not directly attributed to a specific Direct revenue category	Direct revenue line items	Expenses have been allocated using revenue as an allocator.	Allocation of Pipeline Service (%) calculated as Total direct expenses (excl. depreciation) ($) multiplied by Direct revenue line item amount ($) divided by the Total direct revenue amount ($) ratio. Numeric quantities of allocators are displayed in the reporting template. This is provided in order to comply with the current template requirements and is the most appropriate allocator given the template limitations and the fact MAPS is a distribution service.	As discussed in CAM.
2.2.2	Expenses by service	2.2.2EBS_D68:K78	Depreciation	Actual	Direct expenses and Shared expenses are not directly attributed to a specific Direct revenue category	Direct revenue line items	Expenses have been allocated using revenue as an allocator.	Allocation of Pipeline Service (%) calculated as Total depreciation ($) multiplied by Direct revenue line item amount ($) divided by the Total direct revenue amount ($) ratio. Numeric quantities of allocators are displayed in the reporting template. This is provided in order to comply with the current template requirements and is the most appropriate allocator given the template limitations and the fact MAPS is a distribution service.	As discussed in CAM.
2.2.2	Expenses by service	2.2.2_D80:K91	Total shared expenses (excl. depreciation)	Actual	Direct expenses and Shared expenses are not directly attributed to a specific Direct revenue category	Direct revenue line items	Expenses have been allocated using revenue as an allocator.	Allocation of Pipeline Service (%) calculated as Total shared expenses (excl. depreciation) ($) multiplied by Direct revenue line item amount ($) divided by the Total direct revenue amount ($) ratio. Numeric quantities of allocators are displayed in the reporting template. This is provided in order to comply with the current template requirements and is the most appropriate allocator given the template limitations and the fact MAPS is a distribution service.	As discussed in CAM.

2.3 Revenue contributions

A list of capital contributions received (including both customer and government contributions).

Table ID	Table Name	BoP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
2.3.1	Customer contributions received	N/A – No Basis of Preparation ID	Description	Actual	N/A	MS Dynamics NAV	N/A	The Finance ERP was reviewed and any revenue contributions recognised accordingly. Customer contributions are recognised over the economic life in line with accounting standards.	Customer contributions relate to upgrading infrastructure that benefits that particular customer only.
2.3.2	Government contributions received	N/A – No Basis of Preparation ID	Description	Actual	N/A	MS Dynamics NAV	N/A	The Finance ERP was reviewed and any revenue contributions recognised accordingly. None have been identified to report on.	None Noted

2.4 Indirect revenue

A list of the indirect revenue allocated to the pipeline

Table ID	Table Name	BoP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
2.4.1	Indirect revenue allocation	2.4.1.IRA	Description	Actual	N/A	MS Dynamics NAV	N/A	The Finance ERP was reviewed to assess whether any Indirect revenue was received. Indirect revenue was reported as nil on the basis that there was no indirect revenue which was required to be allocated to the pipeline.	N/A

2.5 Shared expenses

Service providers are required to allocate a fair proportion of shared costs such as corporate overheads to each pipeline.

Table ID	Table Name	BoP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
2.5.1	Shared expense allocation	2.5.1SEA_D15:J36	Description categories, Income statement account applied to, Shared costs excluding related parties, Shared costs paid to related parties, (Gross shared costs), % allocated to pipeline, Total allocated to pipeline excluding related parties, Total related party amounts allocated to pipeline (Net shared costs). 3. Asset value - Depreciated Book Value Method (DBVM) (For Non-scheme pipeline only)
An overview of the assets utilised in the pipeline operations based on DBVM.

Table ID	Table Name	Built ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
3.1.1	Pipeline assets (DBVM)	3.1.1PADBVM_D18:E80 3.1.1PADBVM_D106:E119	Pipeline assets, Shared supporting assets	Actual	N/A	Fixed Asset Register (FAR)	Refer to assumptions in table 3.5.1: Pipeline assets at cost and table 3.5.2: Shared assets at cost.	Per source material for non-input cells referencing 'Table 3.5.1: Pipeline assets at cost' and 'Table 3.5.2: Shared assets at cost'. The service provider confirms that the pipeline's assets are measured at historical cost in accordance with AASB 116 Property, Plant and Equipment, none of the pipeline's assets have been revalued since the acquisition date. The pipeline does not depreciate land but does depreciate easements that have a fixed term life. To align with the presentation of information required in Table 3.1.1, the opening cost base in the comparative column has been revised to reflect the opening accumulated depreciation. Current year depreciation has been included in the additions for the current reporting period. **Shared assets allocator and justification** Refer 3.5.1 for the methodology adopted	N/A
3.1.1	Pipeline assets (DBVM)	3.1.1PADBVM_D97:E102	Other non-depreciable pipeline assets	Actual	N/A	Fixed Asset Register (FAR)	N/A	Other non-depreciable pipeline assets are gas line pack. Line pack is not depreciated as the Service Provider believes the residual value of the line pack will exceed the historical cost at the end of the life of the pipeline.	N/A
3.1.1		3.1.1PADBVM_D121:E123	Inventories, Deferred tax assets, Other assets	Actual	N/A	MS Dynamics NAV	N/A	The pipeline's Inventories, deferred tax assets and other assets form part of Pipeline Assets and are reported on the row 'Other non-depreciable pipeline assets. Inventories are allocated based on the ratio of capacity of pipelines owned and operated by the Service Provider as disclosed in 2.2.1. No deferred tax asset exists related to the pipeline. Other assets represents capital work in progress that specifically relate to MAPS. The prior year comparative also includes working capital assets. These have been removed in the current year to provide more relevant information on other assets for users of this template.	N/A
3.1.2		3.1.2ICOPADBVM_D132	Initial costs of pipeline assets (DBVM)	Actual	N/A	Fixed Asset Register (FAR)	N/A	The acquisition costs incurred were sourced from historical asset data held within the FAR which relate to the NWDV position through the MAPS acquisition in 2013.	N/A

3.2 Asset value - Regulatory Asset Base (RAB) (For Scheme pipeline only) An overview of the assets utilised in the pipeline operations based on RAB.									
Table ID	Table Name	BoP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
3.2.1	Pipeline assets (RAB)	3.2.1	N/A	N/A	N/A	N/A	N/A	N/A	This table is only required for scheme pipelines. The pipeline is not a scheme pipeline.

3.3 Asset useful life

The asset useful life schedule, which provides the basis for calculating depreciation for different classes of assets and the reason for choosing this basis.

Table ID	Table Name	BoP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
3.3.1	Asset useful life	3.3.1AUL_D11.F39	Description (list each individual balance sheet item), Commission date (provide a range), Useful life years, Reason for choosing this useful life	Actual	N/A	Report template Pipeline information disclosure guidelines	N/A	**Description (list each individual balance sheet item)** **Commission date (provide a range)** For each asset 'Description' category the date the pipeline was acquired (2013) has been referenced as the commission date. **Useful life years** MAPS was constructed in 1969 but acquired in 2013. The useful life for each category is aligned to the higher assumption in Appendix A in the "Pipeline Information Disclosure" being viewed as an appropriate asset category indicator given the age of the pipeline.	None Noted

3.4 Asset impairment A schedule of impairments made to pipeline assets and impairment reversals.									
Table ID	**Table Name**	**BoP ID**	**Item Name**	**Estimated/Actual**	**Why Estimated**	**Source**	**Assumptions**	**Methodology**	**Additional Comments**
3.4.1	Asset Impaired	3.4.1AI	Asset description, Impairment amount $ nominal, Impairment date, Basis for impairment	Actual	NA	MS Dynamics NAV	N/A	Reviewed the Finance ERP general ledger and FAR to identify whether any impairment transactions have been recorded. No Impairment recorded for the current year.	N/A
3.4.2	Asset Impairment Reversals	3.4.1AIR	Asset description, Prior Impairment amount $ nominal, Impairment date, Basis for impairment, Reversal amount $nominal, Reversal date, Basis for Reversal	Actual	NA	MS Dynamics NAV	N/A	Reviewed the Finance ERP general ledger and FAR to identify whether any impairment transactions have been recorded. No Impairment recorded for the current year.	N/A

3.5 Depreciation amortisation

Line	Table Name	Buff ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
3.5.1	Pipeline assets at cost - pipeline assets &	3.5.1PAAC_C15:Q59	Description, Category, Acquisition date (provide a range),	Actual	NA	MS Dynamics Navision FAR	NA	Assets are recorded with an associated location on the Fixed Asset Register maintained by the Service Provider. Assets with locations only associated with the MAPS have been included in Table 3.5.1 Pipeline assets at cost – pipeline assets. Assets associated with both MAPS and SEPS have been considered for 3.5.2: Shared assets at cost. The Buildings, ICT assets and building leases have been allocated to MAPS based on the ratio of capacity of pipelines (per 2.1.1). Motor vehicles have been allocated based on time charged to MAPS for maintenance relative to time charged for SEPS. The shared cost allocator is the most appropriate available allocator because it allows for costs to be allocated between MAPS and SEPS on a consistent basis that considers the difference is size, complexity and running costs of the two systems. **Category** The FAR is utilised to report all asset transactions for the year at the lowest component level whereby the AER template categories are allocated based on pre-determined asset class alignment. **Acquisition date (provide a range)** Refer to 'Commission date' explanation for Table 3.3.1 Asset useful life. **Useful life** Refer to 'Useful life' explanation for Table 3.3.1 Asset useful life. **Estimated residual value** These assets will not have value beyond the expected useful life. **The Opening cost base, Prior years' accumulated depreciation** These has been calculated by referencing the prior year fixed asset register-linked working file previously aligned to the AER Part 23 reporting template. **Current Year Additions, Current Years Disposals or Early Terminations, Current Year Depreciation, Written Down Value**	Land and easements are not depreciated. Other non-depreciable pipeline assets are gas line pack. Line pack is not depreciated as the Service Provider believes the residual value of the line pack will exceed the historical cost at the end of the life of the pipeline. Pipeline assets include estimates of the costs of dismantling and removing assets associated with the MAPS and restoring the site on which it is located. Estimates are assessed and reviewed on an annual basis at the reporting period end. Any increase or decrease in the measurement due to revised estimates are adjusted in the cost of the related asset in the current period, except where the decrease exceeds the carrying amount of the related asset. The excess is recognised immediately in the profit or loss.
3.5.2	Shared assets at cost (less straight-line depreciation)	3.5.2SAAC_D66:P84	Useful life, Estimated residual value, Opening Cost Base, Current year additions, Current year capitalised Maintenance or improvements, Current year disposals or Early termination, Adjusted Cost Base, Prior years' accumulated depreciation Current year depreciation, Written Down Value						

3.6 Shared supporting assets

Provides the basis for allocating shared assets to the pipeline.

Table ID	Table Name	SoP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
3.6.1	Shared supporting asset allocation	N/A	Description (list each individual shared asset category greater than 5%), Category of shared assets, Total amount, % allocated to pipeline, Total allocated to pipeline	N/A	N/A	N/A	N/A	N/A	N/A

4. Asset value - Recovered Capital Method (RCM)
The asset valuation statement arising from the application of the Recovered Capital Method.

Table Item	Table Name	RAP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
4.1	Pipeline assets (RCM)					The Service Provider was acquired by its current owner in May 2010. The Service Provider has needed to rely on historic financial information recorded or prepared for purposes other than complying with the Guidelines. Information prior to this period has been obtained by the Service Provider from the current owner, but the Service Provider has not been able to determine if the historic records and information are complete and accurate. The Service Provider has also needed to estimate the return on capital required each year. Notwithstanding this comment, the Service Provider has completed a review of the historic financial information and return on capital to satisfy itself that the estimate has been arrived at on a reasonable basis and represents the best estimate in the circumstances.		The service provider has utilised an alternative asset valuation method to the recovered capital method as defined in Rule 11(4)(b)(ii) of the NGR. This is because, in accordance with Rule 11(4)(c) of the NGR, applying the recovered capital method would be inconsistent with the asset valuation objective. The service provider has continued to apply the asset valuation methodology applied and previously published under Part 23. A key reason that an asset valuation using the recovered capital method is inconsistent with the asset valuation objective relates to a wide range of possible valuation estimates arising from reasonable changes to assumptions: - the MAPS was owned by the State Government of South Australia between 1970 to 1995 and was not underwritten through a long-term foundation agreement (i.e. the pipeline was publicly built and then sold to a private owner); - during the period the MAPS was owned by the State Government inflation was high relative to recent periods; - calculations following the recovered capital method over this historical period involve a range of assumptions regarding the appropriate rate of return that would have applied over the period from 1970 to 1995. The compounding effects mean any resulting calculation is very sensitive to the estimated rate of return. Instead of utilising the original construction cost, the Service Provider has relied on the regulatory determination made on its asset value on 10 December 2003 and applied to the period 2001-2005 by the Australian Competition Tribunal decision on the Moomba to Adelaide pipeline – 10 December 2008. The opening balance is based on: • the Optimised Depreciated Replacement Cost (ODRC) determined for the MAPS in the Australian Competition Tribunal decision on the Moomba to Adelaide pipeline – 10 December 2003; and • the ODRC of the Pelican Point capacity expansion that is specified as having been excluded from the MAPS ODRC in that decision and therefore needs to be added to ensure the ODRC represents all MAPS assets in existence at that time. The Service Provider has then rolled this valuation forward following the calculation prescribed by 11(4)(b)(ii), 2(1)(f)(ii)(A) and 2(1)(f)(ii)(C). The Service Provider considers that this approach results in a more reliable estimate than using the original construction cost and is the best estimate in the circumstances. No changes have been made to periods from 2001 to 2014 as compared to disclosures previously published under Part 23. As stated in Basis of Preparation documents previously published in 2016, 2018, 2020, 2021, 2022, 2023 and 2024, the application of this methodology does not change pricing methodology as described in the Reporting Price methodology produced a tariff that was reasonably consistent with current contracting and the Weighted Average Price disclosures.	None Noted
4.1	Pipeline assets (RCM)	4.1_7.14.14.16	Pipeline assets: Construction cost (2000)	Estimated	The MAPS was previously regulated with a determination made on its asset value on 10 December 2003 and applied to the period 2001-2005. The Service Provider has relied on this valuation as the opening balance for the calculations in accordance with the Guidelines. The Service Provider considers that this approach results in a more reliable estimate than using the original construction cost. This is primarily because of the range of assumptions about the appropriate rate of return that would have applied over the period from 1970 to 1995. The MAPS was owned by the State Government of South Australia during this period and inflation was high relative to recent periods. The compounding effect means any resulting calculation is very sensitive to the estimated rate of return	Australian Competition Tribunal decision on the Moomba to Adelaide pipeline – 10 December 2003	Opening RAB value 01/07/2000	The opening balance for the Recovered Capital Method calculation is based on the asset value determined when the MAPS was regulated for the period 2001-2005. The opening balance is based on: •the Optimised Depreciated Replacement Cost (ODRC) determined for the MAPS in the Australian Competition Tribunal decision on the Moomba to Adelaide pipeline – 10 December 2003; and •the ODRC of the Pelican Point capacity expansion that is specified as having been excluded from the MAPS ODRC in that decision and therefore needs to be added to ensure the ODRC represents all MAPS assets in existence at that time.	This value represents the final approved RAB value from the Regulator before full Regulation was removed. The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_7.14.14.17	Pipeline assets: Additions (2001-2013)	Estimated	The Service Provider was acquired by its current owner in May 2013. The Service Provider has needed to rely on historic financial information recorded or prepared for purposes other than complying with the Guidelines. Information prior to this period has been obtained by the Service Provider from the current owner, but the Service Provider has not been able to determine if the historic records and information are complete and accurate	•Archived historical financial information, including the indexation of backed up electronic files •Information extracted from a legacy accounting system •Information published by Australian Competition and Consumer Commission (ACCC) or AER •Information requests to the AER •Financial statements •Annual reports lodged with the Government of South Australia	All additions are incurred mid-year	The amount of capital expenditure since the opening balance and the value of assets disposed of since the decommissioning of the pipeline have been estimated using reports extracted from a fixed asset register extracted from a legacy accounting system. The reports have been reviewed by the Service Provider and adjusted to avoid double counting. •Excluding capital expenditure that the Service Provider believes to be associated with the Pelican Point expansion based on asset and location descriptions, and that may have been considered as part of the regulatory determination of the opening asset value; and •Excluding transfers of assets to the fixed asset register that the Service Provider believes are not capital expenditure and relate to changes in the classification of leased assets based on asset and location descriptions.	Periods from 2001 to 2012 are ended 31 December. In 2013 the Service Provider changed its reporting date to 30 June, accordingly column h is for a six-month period The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_7.14.14.18	Pipeline assets: Additions (2014-2025)	Actual	N/A	MS Dynamics Navision - FAR module	Additions per the FAR were cash related. All additions are incurred mid-year	Extract from FAR	No Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.

4.1	Pipeline assets (RCM)	4.1_7.14.14.19	Pipeline assets: Disposal at cost (2014 - 2025)	Actual	N/A	MS Dynamics Navision - FAR module	All disposals occur mid-year. Disposals represents the value of pipeline assets disposed of in each period as recorded in the Fixed Asset Register maintained by the Service Provider as required by the Guidelines. The value used for disposals is the net book value	Extract from FAR	No Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_14.18	Pipeline assets: Disposals (2026 onwards)	Actual	N/A	MS Dynamics Navision - FAR module	All disposals occur mid-year. Disposals represents the value of pipeline assets disposed of in each period as recorded in the Fixed Asset Register maintained by the Service Provider as required by the Guidelines. The value used for disposals is the net book value	Extract from FAR	None Noted
4.1	Pipeline assets (RCM)	4.1_3.21.3.26	Shared assets	Estimate	The Service Provider was acquired by its current owner in May 2013. The Service Provider has needed to rely on historic financial information recorded or prepared for purposes other than complying with the Guidelines. Information prior to this period has been obtained by the Service Provider from the current owner, but the Service Provider has not been able to determine if the historic records and information are complete and accurate	N/A	The Service Provider believes it is possible that shared assets would have existed during the period such as a Head Office and shared ICT assets but has not been able to identify historical information or to estimate additions and disposals for the purpose of completing this reporting. Consequently, no assets have been classified as 'shared' before 2013.	N/A	The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_7.17.3.27	Shared assets: Leased Asset	Actual	N/A	MS Dynamics Navision	N/A	Extract from NAV. Based on lease accounting in line with AASB16. Movements to the lease asset as a result of the expiry of time or adjustments to the remaining lease term are included in the current year lease asset amount	The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_14.17	Shared assets: Leased Asset	Actual	N/A	MS Dynamics Navision	N/A	Extract from NAV. Based on lease accounting in line with AASB16. Movements to the lease asset as a result of the expiry of time or adjustments to the remaining lease term are included in the current year lease asset amount	None Noted
4.1	Pipeline assets (RCM)	4.1_10.11.4.31	Return of Capital: Revenue (2001-2005)	Estimated	The MAPS was previously regulated with a determination made on its asset value on 10 December 2003 and applied to the period 2001-2005.	•Archived historical financial information, including the indexation of backed up electronic files •Information extracted from a legacy accounting system •Information published by Australian Competition and Consumer Commission (ACCC) or AER •Information requests to the AER •Financial statements •Annual reports lodged with the Government of South Australia	N/A	Revenues have been estimated using the ACCC determination for the period 2001 to 2005. The determination included forecast CPI, which has been updated for actual CPI over the period	The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_10.11.5.32	Return of Capital: Revenue (2006-2014)	Estimated	The Service Provider was acquired by its current owner in May 2013. The Service Provider has needed to rely on historic financial information recorded or prepared for purposes other than complying with the Guidelines. Information prior to this period has been obtained by the Service Provider from the current owner, but the Service Provider has not been able to determine if the historic records and information are complete and accurate	•Archived historical financial information, including the indexation of backed up electronic files •Information extracted from a legacy accounting system •Information published by Australian Competition and Consumer Commission (ACCC) or AER •Information requests to the AER •Financial statements •Annual reports lodged with the Government of South Australia	N/A	Revenue and operating expenses have been estimated using historic management reports prepared by previous owners of the Service Provider that include actual, forecast and budget information. Revenue for the MAPS and SSPS pipelines owned by the Service Provider is separately identifiable in these management reports. Revenue has been estimated based on these reports with an adjustment to remove actual revenues associated with the SSPS during the relevant period.	The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_7.11.4.33	Return of Capital: Revenue (2015-2017)	Actual	N/A	PygiT and MS Dynamics Navision	N/A	Extract from NAV and PygiT	Periods from 2001 to 2012 are ended 31 December. In 2013 the Service Provider changed its reporting date to 30 June, accordingly column h is for a six-month period
4.1	Pipeline assets (RCM)	4.1_14.11.4.20	Return of Capital: Revenue (2018-2025)	Actual	N/A	PygiT and MS Dynamics Navision	N/A	Extract from NAV and PygiT	The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_14.21	Return of Capital: Revenue (2026 onwards)	Actual	N/A	PygiT and MS Dynamics Navision	N/A	Extract from NAV and PygiT	None Noted
4.1	Pipeline assets (RCM)	4.1_10.12.4.12	Return of Capital: Operating expenses (2001-2005)	Estimated	The MAPS was previously regulated with a determination made on its asset value on 10 December 2003 and applied to the period 2001-2005.	•Archived historical financial information, including the indexation of backed up electronic files •Information extracted from a legacy accounting system •Information published by Australian Competition and Consumer Commission (ACCC) or AER •Information requests to the AER •Financial statements •Annual reports lodged with the Government of South Australia	N/A	Operating expenses have been estimated using the ACCC determination for the period 2001 to 2005. The determination included forecast CPI, which has been updated for actual CPI over the period	The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_10.12.5.13	Return of Capital: Operating expenses (2006-2014)	Estimated	The Service Provider was acquired by its current owner in May 2013. The Service Provider has needed to rely on historic financial information recorded or prepared for purposes other than complying with the Guidelines. Information prior to this period has been obtained by the Service Provider from the current owner, but the Service Provider has not been able to determine if the historic records and information are complete and accurate	•Archived historical financial information, including the indexation of backed up electronic files •Information extracted from a legacy accounting system •Information published by Australian Competition and Consumer Commission (ACCC) or AER •Information requests to the AER •Financial statements •Annual reports lodged with the Government of South Australia	N/A	Costs identifiable in these management reports are the aggregate costs for a group of pipelines. The costs for the MAPS have been estimated by pro-rating based on the percentage of costs budgeted for RAM, comprising both the MAPS and SSPS, relative to total budgeted costs, and then adjusting to remove estimated costs associated with the SSPS	Costs excludes transactions related costs and taxes incurred by the current owner of the Service Provider in 2010 Operating expenses do not include depreciation as this is considered in the return of capital calculation instead. The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_7.12.4.8.32	Return of Capital: Operating expenses (2014 - 2017)	Actual	N/A	MS Dynamics Navision and Maximo	N/A	Extract from Maximo and NAV	Refer to CAM. Operating expenses do not include depreciation as this is considered in the return of capital calculation instead. The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_4.12.12.42.52	Return of Capital: Operating expenses (2018 - 2025)	Actual	N/A	MS Dynamics Navision and Maximo	N/A	Extract from Maximo and NAV	Refer to CAM. Operating expenses do not include depreciation as this is considered in the return of capital calculation instead. The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_14.12	Return of Capital: Operating expenses (2026 onwards)	Actual	N/A	MS Dynamics Navision and Maximo	N/A	Extract from Maximo and NAV	Refer to CAM. Operating expenses do not include depreciation as this is considered in the return of capital calculation instead.
4.1	Pipeline assets (RCM)	4.1_3.23.13.33	Return of Capital: Net tax liabilities (2001 - 2025)	Estimated	The MAPS was previously regulated with a determination made on its asset value on 10 December 2003 and applied to the period 2001-2005.	•Archived historical financial information, including the indexation of backed up electronic files •Information extracted from a legacy accounting system •Information published by Australian Competition and Consumer Commission (ACCC) or AER •Information requests to the AER •Financial statements •Annual reports lodged with the Government of South Australia	N/A	Net tax liabilities have been estimated using the values specified in the ACCC determination for the period 2001 to 2005	The net tax payable is estimated to be zero as there were zero forward tax losses during this period. The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_3.23.13.0.33	Return of Capital: Net tax liabilities (2026 onwards)	Estimate	The Service Provider was acquired by its current owner in May 2013. The Service Provider has needed to rely on historic financial information recorded or prepared for purposes other than complying with the Guidelines. Information prior to this period has been obtained by the Service Provider from the current owner, but the Service Provider has not been able to determine if the historic records and information are complete and accurate	•Archived historical financial information, including the indexation of backed up electronic files •Information extracted from a legacy accounting system •Information published by Australian Competition and Consumer Commission (ACCC) or AER •Information requests to the AER •Financial statements •Annual reports lodged with the Government of South Australia	N/A	Net tax liabilities have been modelling the net tax liability for 2026 as follows: •Revenue (BOP ID 4.1_4431) •Operating expenses (BOP ID 4.1_332) •Tax depreciation updated for annual capital expenditure by asset class (BOP ID 4.1_4434) •Post-tax interest deduction based on the debt component of cost of capital (BOP ID 4.1_4436) Gross tax payable is then further reduced by gamma at 0.6 reflecting the regulatory approach to include the value of imputation credits in the tax liability for the Service Provider. Tax losses carried forward from the ACCC determination have been retained to maintain a consistent approach with using the determination to set the opening asset value for the Recovered Capital Method calculation. The impact of retaining tax losses from the ACCC determination is to delay the period in which tax is calculated as paid by the Service Provider to later years, and consequently reduce the valuation calculated following the Recovered Capital Method.	The net tax payable is estimated to be zero as there were zero forward tax losses during this period. The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_14.13	Return of Capital: Net tax liabilities (2026 onwards)	Actual	N/A	Revenue (BOP ID 4.1_4431) •Operating expenses (BOP ID 4.1_332) •Tax depreciation updated for annual capital expenditure by asset class (BOP ID 4.1_4434) •Post-tax interest deduction based on the debt component of cost of capital (BOP ID 4.1_4436)	N/A	Net tax liabilities have been modelling the net tax liability for 2026 as follows: •Revenue (BOP ID 4.1_4431) •Operating expenses (BOP ID 4.1_332) •Tax depreciation updated for annual capital expenditure by asset class (BOP ID 4.1_4434) •Post-tax interest deduction based on the debt component of cost of capital (BOP ID 4.1_4436) Gross tax payable is then further reduced by gamma at 0.6 reflecting the regulatory approach to include the value of imputation credits in the tax liability for the Service Provider.	None Noted

4.1	Pipeline assets (RCM)	4.1_3.23.13.0.55	Return of Capital: return on capital (2001-2025)	Estimate	N/A	Formula	N/A	**Rate of return (WACC)** •Return on capital in row 35 of the template / [Opening asset value in row 38 of the template plus half of the additions for the year from row 16] Where the opening or closing asset value (including negative residual value) is zero, we report N/A as the WACC calculation is no longer relevant and does not provide useful information to users.	The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document
4.1	Pipeline assets (RCM)	4.1_14.35	Return of capital: return on capital (2026 onwards)	Estimate	N/A	Formula	N/A	**Rate of return (WACC)** •Return on capital in row 35 of the template / [Opening asset value in row 38 of the template plus half of the additions for the year from row 16] Where the opening or closing asset value (including negative residual value) is zero, we report N/A as the WACC calculation is no longer relevant and does not provide useful information to users.	None Noted
4.1	Pipeline assets (RCM)	4.1_3.23.13.39	Return of Capital: Rate of Return WACC (2001-2025)	Actual	The MAPS was previously regulated with a determination made on its asset value on 10 December 2003 and applied to the period 2001-2005.	Australian Competition Tribunal decision on the Moomba to Adelaide pipeline – 10 December 2003	N/A	Cost of capital has been estimated using the ACCC determination for the period 2001 to 2005	The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document
4.1	Pipeline assets (RCM)	4.1_3.23.13.0.39	Return of Capital: Rate of Return WACC (2026-2033)	Estimate	Dependent on rate of return estimates.	**Risk free rate:** Bloomberg 10-year Commonwealth Government Security **Cost of debt:** 10 year BBB bonds provided by Bloomberg and the RBA for value curve estimates (until Sept 2023) **Equity beta, Market Risk Premium, gearing, gamma and tax rates:** Mandatory Australian Competition Tribunal decision on the Moomba to Adelaide pipeline – 10 December 2003	N/A	The cost of capital has been calculated based on the WACC included in the ACCC determination, with the risk free rate and cost of debt updated each reporting period. The Bloomberg 10-year Commonwealth Government Security was used as the source for the risk free rate. The cost of debt was calculated with reference to average end of month values during the relevant periods for 10 year BBB bonds provided by Bloomberg and the RBA fair value curve estimates.	Periods from 2001 to 2012 are ended 31 December. In 2013 the Service Provider changed its reporting date to 30 June, accordingly column h is for a six-month period. The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_3.23.13.0.39	Return of Capital: Rate of Return WACC (2034-2025)	Estimate	Dependent on rate of return estimates.	**Risk free rate:** Bloomberg 10-year Commonwealth Government Security **Cost of debt:** 10 year BBB bonds provided by Bloomberg and the RBA fair value curve estimates (until Sept 2023) **Gamma and tax rate** Mandatory Australian Competition Tribunal decision on the Moomba to Adelaide pipeline – 10 December 2003.	N/A	The cost of capital has been calculated as a benchmark weighted average of the cost of equity and cost of debt. This return is applied to the value of the asset base in each of the relevant years to give the cost of capital building block. **Cost of Equity** The cost of equity has been calculated using the SLCAPM method applied by the AER as the foundation model for estimated return of equity. **Equity Beta** An equity beta of 1.0 has been applied, consistent with the MRPS being an unregulated pipeline subject to competition. **Risk free rate** The risk free rate is calculated based on the 20 day average of the Bloomberg 10-year Commonwealth Government Security for the period directly before the regulatory period. This series was available continuously over the period of the calculation. **Cost of Debt** The cost of debt has been calculated using the method applied by the AER, which is to calculate the simple average of the Bloomberg and Reserve Bank of Australia fair value yields for the broad BBB credit rating band at a term to maturity of ten years using the daily rate for the year before the regulatory period. This cost has been averaged over a ten year period as a trailing average. Since September 2023 RBA no long provides the relevant fair value yields therefore only the Bloomberg rates are utilised after September 2023. **Gamma and tax rate**	The Methodology applied is consistent with the methodology applied in disclosures previously published under Part 23 and as described in each basis of preparation document.
4.1	Pipeline assets (RCM)	4.1_14.39	Return of Capital: Rate of Return WACC (2026 onwards)	Estimate	Dependent on rate of return estimates.	**Risk free rate:** Bloomberg 10-year Commonwealth Government Security **Equity Beta:** Australian and internationally listed comparable companies Capital IQ database **Market risk premium, gearing and gamma:** AER's Rate of Return Annual Update 2025 (November 2025) **Cost of debt:** Treasury reports and MS Dynamics Navision		The cost of capital has been calculated to ensure alignment with the requirements of the AER's Pipeline Information Disclosure Guidelines, with consideration of AER's Rate of Return Annual Update 2025 (November 2025) as follows: **Weighted Average Cost of Capital (WACC)** This formula estimates the rate of return as the nominal vanilla WACC. This approach estimates the rate of return as the weighted average of opportunity costs assessed across two sources of capital: funding: debt and equity **Cost of equity** The cost of equity is estimated utilising the Sharpe-Lintner capital asset pricing model as required by AER. **Risk-free rate** The risk free rate was based on the Bloomberg 10-year Commonwealth Government Security was used as the source for the risk free rate based on a 20 day average of the period preceding the regulatory reporting period. This series was available continuously over the period of the calculation. **Equity Beta** The equity Beta is based on recent analysis of Australian and internationally listed comparable companies over the past 2-5 years, re-levered to align with AERs NUH network gearing requirements. **Inputs based on AER's Rate of Return Annual Update 2025 (November 2025):** Market risk premium of 6.2%, Gearing –The gearing ratio of 60%, Gamma (imputation credits) of 0.57 **Cost of debt** The cost of debt was calculated based on actual portfolio cost of debt for the year. This is based on accounting recognition of interest including amortisation of upfront debt fees.	Using a WACC as an estimate for rate of return is an accepted methodology adopted by the Australian Energy Regulatory (AER) and therefore represents the best estimate possible for this reporting. The data inputs into the WACC have been sourced from published AER accepted sources aligning to Part 10 consistent with the AER's Pipeline Information Disclosure Guidelines for 2025.
4.1	Pipeline assets (RCM)	4.1_3.23.13.0.39	For information: Rate of return WACC1 (2001 onwards)	Estimate	Impact of Rate of return components.	Items 'Return of Capital: Return on capital' in this table above. 4.1 Pipeline capital expenditure

Capital expenditure greater than 5% of construction cost, historical expansions/extensions and any planned expansions/extensions that have advanced to "Final Investment Decision" stage.

Table ID	Table Name	Ref ID	Item Name	Estimated / Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
4.1.1	Capital expenditure greater than 5% of construction cost	4.1.1CEGTOCC_D15:E41	Description of works, Date recognised, Expenditure ($ nominal)	Actual	N/A	MS Dynamics Nav/PAR	N/A	The service provider analysed the underpinning data for the RCM template and with a view to identifying any projects where capex was greater than 5% of the construction cost across the years. **Actual** The relevant project reporting detail including the commissioning date has been referenced in providing this detail by looking at total project costs greater than 5% of disclosed construction cost.	N/A
4.1.2	Historical expansions and extensions	4.1.2HEAE_C47:E73	Description of works, Date recognised, Expenditure ($ nominal)	Actual	N/A	MS Dynamics Nav/PAR 2025 Annual Report MAPS PLS	N/A	Reviewed all MAPs pipeline construction to establish two expansion projects completed post acquisition. The FAR was then referenced by location to determine the associated project related acquisition expenditure incurred.	None Noted
4.1.3	Planned expansions and extensions of capacity	4.1.3.PEAEOC	Description of the matter Proposed commissioning date, or a range of dates Expected end date, or a range of dates Facility's proposed nameplate rating, or the estimated likely range during affected period Proposed expenditure (if available, required for publicly announced expansions)	Actual	N/A		N/A	Planned expansions and includes only those projects for which a Financial Investment Decision (FID) has been taken by the end of the current reporting period. The pipeline had no planned expansions and/or extensions as at the end of the current reporting period which had passed Financial Investment Decision (FID).	None Noted

5. Historical demand

Information on the amount of capacity that was contracted in each financial year and the amount of capacity that was actually used in each financial year.

Table ID	Table Name	BoP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
5.1	Historical Demand Information	HDI_B15:D15	Historical demand information	Actual	N/A	PypIT	N/A	MDQs provided are per executed GTAs. This data is collated in the "Contract Capacity Summary" workbook. MDQs are entered into CRS/PypIT, uncontracted pipeline capacity is shared with AEMO/GBB monthly per the NGR.	N/A
5.2	Demand by pipeline service	N/A	Contracted MDQ: TJ/day	Actual	N/A	PypIT, Contract Capacity Summary report	N/A	MDQs provided are per executed GTAs. This data is collated in the "Contract Capacity Summary" workbook. MDQs are entered into CRS/PypIT, uncontracted pipeline capacity is shared with AEMO/GBB monthly per the NGR. MDQs can change day to day per the GTAs. The values provided are the average across the financial year. Park and loan services is the sum of firm storage services and the imbalance tolerances. This is the volume of firm swing allowed between minimum and maximum storage. It is the sum of Firm Park / Expanded Imbalance (+), Firm Loan / Expanded Imbalance (-), Imbalance Tolerance (+) and Imbalance tolerance (-). It excludes any non-firm storage services. "Other" services considers the total contracted MDQ capacity as the relevant allocator for the Pricing Template calculation. This service cannot be allocated to a specific MDQ, but is best spread across the total contracted position.	N/A
5.3	Daily demand	N/A	Contracted firm capacity-transportation Contracted firm capacity-storage Utilised capacity Pipeline nameplate capacity	Actual	N/A	PypIT	N/A	Contracted firm capacity – transportation Per active GTA on this date, also refer to "Contract Capacity Summary" workbook. Contracted firm capacity – storage Per active GTA on this date. With reference to the "Contract Capacity Summary" workbook, it is the Firm Park / Expanded Imbalance. Utilised capacity Daily demand information has been extracted from GBB. This data is sent from CRS/PypIT. Separate daily Contracted MDQ reports by service category (e.g. Firm forward) were downloaded from PypIT for each day in the reporting period. The reports utilised a PypIT field attached to each service which flags whether a service constitutes 'contracted capacity' (as defined in Part 25 of the National Gas Rules). Pipeline nameplate capacity Pipeline nameplate capacity is determined by engineering studies.	N/A

6. Pricing template

Provide a process or mechanism by which users and prospective users can transform the financial and historical demand information published by service providers into one or more cost-based pricing benchmarks.

Table ID	Table Name	BoP ID	Item Name	Estimated/Actual	Why Estimated	Source	Assumptions	Methodology	Additional Comments
6.1	Inputs	N/A	Asset allocation to pipeline service %	Estimate	Assets are not allocated a pipeline service	Table 2.2.1 Direct revenue line items	N/A	Asset allocation to pipeline service Allocator: Ratio of the Direct revenue line item and Total Direct Revenue (excluding customer contributions). Refer to BoP for Table 2.2.2 for Direct Expenses Service allocation percentage details. Allocator justification: The allocator is the most appropriate because there is no direct link between the assets and any individual category of service maintaining the allocation on the basis of revenue is most appropriate.	N/A
6.1	AER Input	N/A	AER inputs: Average regulatory return on debt	Actual	N/A	Represents AER Inputs (pre-populated by the AER)	N/A	Represents AER Inputs (pre-populated by the AER). We note this rate is different to the rate prescribed in AER's Rate of Return Annual Update 2024 (December 2024)	N/A
6.1	AER Input	N/A	AER inputs: Gearing	Actual	N/A	Represents AER Inputs (pre-populated by the AER)	N/A	Represents AER Inputs (pre-populated by the AER)	N/A
6.1	AER Input	N/A	AER inputs: Statutory tax rate	Actual	N/A	Represents AER Inputs (pre-populated by the AER)	N/A	Represents AER Inputs (pre-populated by the AER)	N/A
6.1	AER Input	N/A	AER inputs: Gamma	Actual	N/A	Represents AER Inputs (pre-populated by the AER)	N/A	Represents AER Inputs (pre-populated by the AER)	N/A
6.1	AER Input	N/A	AER inputs: Average regulatory rate of return	N/A	N/A	Represents AER Inputs (pre-populated by the AER)	N/A	Represents AER Inputs (pre-populated by the AER)	N/A
6.2 - 6.4	Pricing Benchmarks Elements calculated Calculation Process	N/A	Pricing Benchmarks	N/A	N/A	Represents AER Inputs (pre-populated by the AER)	N/A	We note these calculations are derived from other sheets. We note there are some discrepancies in the calculations and information referenced in other sheets to provide the high and low calculations such as: - days do not add up to 365 total days - depreciable assets exclude land and easements, excludes non-deprn and excludes shared assets - AER's benchmark return does not appear to align to its Rate of Return Annual Update 2024 (December 2024)	N/A

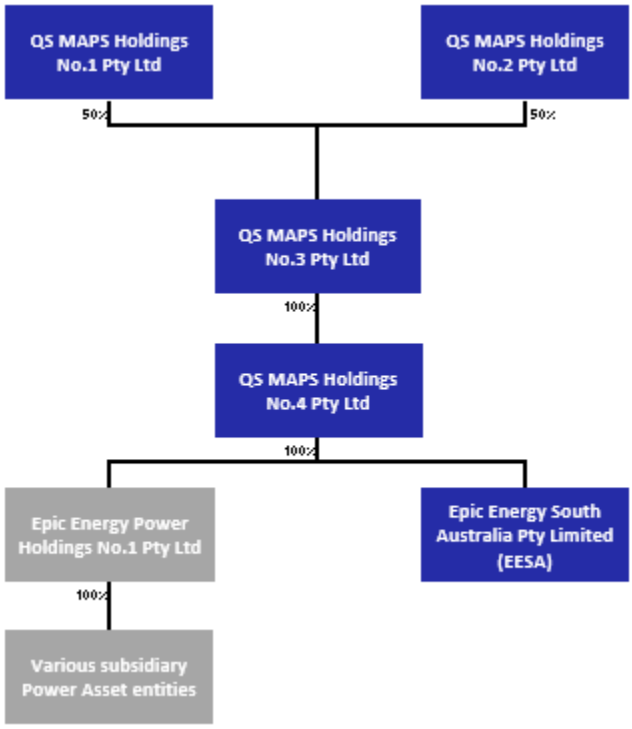
1 Corporate Profile

Epic Energy South Australia Pty Limited (EESA) owns and operates the Moomba to Adelaide Pipeline System (MAPS), one of Australia's largest pipeline systems, supplying gas from major Eastern Australia basins.

EESA also operates the South-Eastern Pipeline System (SEPS) and provides monitoring, maintenance, and engineering services. The Corporation has a growing portfolio of renewable infrastructure which are contained within separate Power Asset entities as shown in the corporate structure below and excluded from the Part 10 Reporting requirements of the NGR:



The two non-scheme pipelines subject to part 10 Regulations are SEPS and MAPS. Both of these pipelines are contained within the Epic Energy South Australia Pty Limited (EESA) corporate structure:

1.1 MAPS

The MAPS features:

- A 782 km bi-directional mainline pipeline between Moomba to Adelaide;
- 335 km of pipeline laterals, including a 77.8 km pipeline lateral from the mainline to Port Pirie and Whyalla and a 38.7 km lateral from the mainline to Angaston; and
- 9 compressor stations, 6 operational, 3 decommissioned.

A map of the MAPS is provided as part of the Pipeline Information on EESA's website[1] along with a list of receipt and delivery points. The current nameplate capacity and capacity that is available for sale is also included in the Pipeline Information.

EESA owns, controls and operates the MAPS. The MAPS is a non-scheme pipeline.

1.2 SEPS

The SEPS is an 82km pipeline system that was built in 1991 to deliver gas from the Katnook processing plant near Penola in South-Eastern South Australia to Snuggery and Mount Gambier.

EESA owns, controls and operates the SEPS. The SEPS is a non-scheme pipeline.

2 Nature, Scope and Purpose

The purpose of this document is to set out the Cost Allocation Methodology (CAM) adopted by EESA for non-scheme financial reporting. The CAM sets out the principles, methods, and inputs used to allocate costs for MAPS and SEPS in accordance with Part 10 of the National Gas Rules (NGR) and the AER Pipeline Information Disclosure Guideline. The CAM applies to all pipeline services provided, including firm, interruptible, and park services, and covers both direct and shared costs attributable to pipeline operations, maintenance, and capital works.

2.1 Definitions

Term	Definition
EESA	Epic Energy South Australia Pty Limited

SEPS	South Eastern Pipeline System
CAM	Cost Allocation Methodology
AER	Australian Energy Regulator
FRT	Financial Reporting Template
Opex	Operating expenditure
Capex	Capital expenditure
RCM	Recovered Capital Method
BoP	Basis of Preparation

[1] https://epicenergy.com.au/moomba-to-adelaide-pipeline-system/

2.2 Responsibility for the Cost Allocation Methodology

The Chief Financial Officer (CFO) and Financial Controller are responsible for periodic review and approval of the CAM, ensuring it remains current with regulatory, accounting, and organisational changes. Revisions to the CAM must be approved by the CFO and Financial Controller.

2.3 Record Maintenance

All cost allocations and supporting records are maintained in accordance with AER guidelines and statutory requirements. Supporting cost reports and working files are prepared and made available to external auditors. These records are supported by EESA's comprehensive record protection and retention procedures and practices, as well as the relevant data recovery and back up processes.

2.4 Compliance with Cost Allocation Methodology

The Financial Controller prepares financial information for Part 10 reporting in accordance with the CAM. The CFO is responsible for the final review of financial information reported in Part 10 documentation. Compliance is endorsed by management and reviewed by independent auditors.

3 Costing Principles and Policies

Costs are collected and allocated in accordance with EESA's accounting policies and the CAM. Financial data is maintained in EESA's financial management systems, Microsoft Dynamics Navision, (NAV) and reconciled to statutory accounts. All costs are recorded by the legal entity that incurs the cost using a general ledger account associated with the nature of cost.

Asset Maintenance Activities are undertaken through issuing detailed work orders in EESA's Asset Management System (Maximo). Work Orders generated in Maximo for Asset Maintenance Activities include Work Breakdown Structures (WBS) which include either labour, service or materials which are directly attributed to an asset location.

All Purchase Orders are raised and approved in Maximo with invoice approval and goods receipting also occurring in Maximo. The details within Maximo are imported into NAV to allow for costing analysis at a location level through a staging table.

Additional information captured for each purchase order includes the entity, the department the cost relates to and location where applicable. Costs directly attributable to power assets are coded to those relevant dimensions.

The business is also split into departments (such as Day Crew, Integrity, Engineering) to capture non-location specific costs such as salary and wages, finance costs and so forth. This department level information is captured at a transaction level.

Rule 103(4)(c) of the National Gas Rules (NGR) requires that service provider must only allocate costs to a pipeline that are directly attributable to the pipeline and if costs are not directly attributable to the pipeline,

but which are incurred in providing services by means of the pipeline, such costs must be allocated to the pipeline using an appropriate allocator.

The CAM is built to comply with Rule 103(4)(c) by allocating costs (operating or capital) as either:

1. Directly attributable costs or
2. Indirectly allocated costs

4 Cost Allocation by Cost Type

4.1 Directly Attributable Costs

These costs can be directly attributed to a pipeline (MAPS or SEPS) based on asset location. Items related to separate entities or excluded services (such as Business Development) are directly excluded from the costs through entity and department dimension attributes.

Cost type	Cost Driver
Labour	Labour associated with a work order is costed to the work order (including asset location) using a standard labour rate. The labour rate is reviewed at least annually as part of the financial year's budget process.
Materials	Materials associated with operations and maintenance and capital works projects are procured through the issuing of work orders in Maximo and assigned a location in line with the work order where applicable.
Services/ Subcontractors	External contractors may be sourced to supplement the existing workforce for specific projects, additional workloads or to cover employee absences. Subcontractor costs are receipted against a purchase order in Maximo and then assigned to the relevant WBS.
Depreciation	Depreciation has been identified from the Fixed Asset Register maintained by the Service Provider as part of its financial information management systems (NAV) and is identified through its location as identified in the fixed asset register.
License and regulatory costs	These costs have been identified from the financial information management systems (NAV) as the direct cost of the Service Provider maintaining the relevant pipeline license and can be traced through to direct invoice lines.

4.2 Indirectly Allocated Costs

Indirectly allocated costs include those costs which cannot be directly attributed to a pipeline as they are 'shared' in nature. As all costs are captured at a transactional level with an assigned department and entity, costs related to other entities (such as Power assets) or excluded activities (such as Business Development) are excluded from the costs through entity and department attributes.

Remaining shared costs are allocated according to the factors that cause those costs. Some of the below costs are allocated based on a pipeline system capacity ratio. This is the ratio of pipeline system capacity

between MAPS and SEPS based on the nameplate capacity for each of these pipelines. This cost allocator is the most appropriate available allocator because it allows for costs to be allocated between MAPS and SEPS on a consistent basis that considers the difference in size, complexity and running costs of the two systems.

Cost type	Allocation
Employee costs	Total employee related costs incurred by EESA include salaries, superannuation, employee benefits, training costs, incentive schemes and costs associated with working in remote areas such as roster flights and food. These costs have been included as shared costs – employee costs and then reduced by the following allocations: • Labour allocated against work orders associated with the relevant pipeline locations. • Employee costs associated with capital projects are removed based on time recorded against capital projects. These costs are included in the cost of pipeline assets. • Employee costs associated with work orders that relate directly to other assets or business activities have been removed. • Employees associated with departments that work on non-pipeline related activities have been removed such as Business Development. The remaining employee costs are allocated based on a pipeline system capacity ratio.
IT and Communication Costs	Information technology and communication costs include all costs associated with software licensing and support, networking and communication costs. It has been allocated based on a pipeline system capacity ratio.
Shared Asset Depreciation – motor vehicles	Shared assets and their associated depreciation have been identified from the Fixed Asset Register for assets which do not have a specific location associated with either the MAPS or SEPS. Motor vehicle depreciation has been allocated based on the time charged to SEPS for maintenance activities relative to the time for MAPS.
Shared Asset Depreciation – ICT and other assets	Other depreciation which relates to buildings and information communication and technology (ICT) assets has been allocated based on a pipeline system capacity ratio.
Other shared costs	Other shared costs include consultants, audit and legal advice, the insurance program and travel and related expenses. EESA has Management Service Agreements in place with other legal entities in the Epic Group to provide defined services. EESA recovers the cost of providing these services from the other legal entities which results in a decrease to other shared costs. All other shared costs have been allocated based on a pipeline system capacity ratio.

5 Cost Allocation by Pipeline Service Category

As per the Part 10 Financial Reporting Template, section 2.2 “Allocation of Services” EESA is required to allocate total expenses by distribution pipeline service category. Costs are allocated to pipeline services (firm, interruptible, park) based on revenue earned for each service as a percentage of total revenue. This is provided in order to comply with the current template requirements and is the most appropriate allocator given the template limitations as MAPS and SEPS are distribution pipelines. This has been noted in the Basis of Preparation.

6 Related Party Costs

EESA does not provide any transactions or direct services to its related parties. Related Parties are defined in line with AASB 124 and would include Power Assets located in separate entities. EESA incurs all administrative costs. It recovers a portion of these through an allocation of a Management fee to other entities and across MAPS and SEPS. This is deemed a shared cost allocation rather than direct transaction with other related parties and described in “other” shared costs above. EESA maintains a number of internal controls to ensure that the costs of related businesses undertaken by other entities are not allocated to service providers, including the monitoring and review of transactions being correctly coded to separate entities.

To: The directors of Epic Energy South Australia Pty Ltd

Independent auditor's review report to the Directors on Historical Non-Financial Information included within Gas Pipeline Operator Part 10 Financial Reporting Template of Epic Energy South Australia Pty Ltd (Moomba to Adelaide Pipeline System Network) for the period 1 July 2025 to 30 June 2026

Scope

In accordance with the terms of engagement letter dated 12 March 2026, we were engaged by Epic Energy South Australia Pty Ltd (the "Company") to perform an independent limited assurance engagement in respect of the accompanying historical non-financial information included within Gas Pipeline Operator Part 10 Financial Reporting Template (the "Subject Matter") of Epic Energy South Australia Pty Ltd (Moomba to Adelaide Pipeline System Network) (the "Network") as required by the Australian Energy Regulator ("AER") under Sections 1 through 8 of the Pipeline Information Disclosure Guidelines dated October 2023 (the "Notice") for the period 1 July 2025 to 30 June 2026 (the "Reporting Period") which comprise the following:

- 5. Historical Demand
- Cost allocation methodology

The criteria (the "Criteria") against which we assessed the Subject Matter is the accompanying Basis of Preparation.

Management's responsibility for the schedule

The Management of the Network is responsible for the Subject Matter and for the preparation of the Subject Matter in accordance with the Criteria.

Our Independence and quality management

We have complied with the ethical requirements of the Accounting Professional and Ethical Standard Board's APES 110 *Code of Ethics for Professional Accountants (including Independence Standards) relevant to assurance engagements, which are founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.*

PricewaterhouseCoopers, ABN 52 780 433 757
Level 11, 70 Franklin Street, ADELAIDE SA 5000
GPO BOX 418, ADELAIDE SA 5001
T: +61 8 8218 70000, F: +61 8 8218 7999, www.pwc.com.au

Liability limited by a scheme approved under Professional Standards Legislation.

Our firm applies Australian Standard on Quality Management ASQM 1, *Quality Management for Firms that Perform Audits or Reviews of Financial Reports and Other Financial Information, or Other Assurance or Related Services Engagements*, which requires the firm to design, implement and operate a system of quality management including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Our responsibilities

Our responsibility is to express a limited assurance conclusion based on the procedures we have performed and the evidence we have obtained.

Our engagement has been conducted in accordance with the Australian Standard on Assurance Engagements (ASAE 3000) *Assurance Engagements Other Than Audits or Reviews of Historical Financial Information*. That standard requires that we plan and perform this engagement to obtain limited assurance about whether anything has come to our attention to indicate that the Subject Matter has not been prepared, in all material respects, in accordance with the Criteria, for the reporting period. The procedures we performed were based on our professional judgement and included:

- Obtaining an understanding, through inquiry with management, of the preparation process including how source data was gathered for the Subject Matter for the Period;
- Reading the Basis of Preparation and evaluating whether the Subject Matter had been prepared in accordance with the Basis of Preparation;
- Where applicable, reconciling the Subject Matter to information previously submitted by the Network to external bodies, for example to the Australian Energy Regulator ('AER'), and obtaining explanations from management for material variances; and
- Testing the mathematical accuracy of the Subject Matter

The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement and consequently the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed. Accordingly, we do not express a reasonable assurance opinion.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our conclusion.

Use of report

This report was prepared for the Directors of Epic Energy South Australia Pty Ltd to assist them in complying with the Notice, using criteria designed for this purpose. We disclaim any assumption of responsibility for any reliance on this report to any persons or users other than the Directors of Epic Energy South Australia Pty Ltd, or for any purpose other than that for which it was prepared.

Inherent limitations

Because of the inherent limitations of any limited assurance engagement, it is possible that fraud, error or non-compliance may occur and not be detected. A limited assurance engagement is not designed to detect all instances of non-compliance of the Subject Matter with the Criteria, as it is limited primarily to making enquiries, of the Network's management, and applying analytical procedures. The limited assurance conclusion expressed in this report has been formed on the above basis.

Conclusion

Based on the procedures performed and evidence obtained, nothing has come to our attention that causes us to believe that the Subject Matter has not been prepared, in all material respects, in accordance with the Criteria for the period 1 July 2025 to 30 June 2026.

Independent auditor's review report to the directors on Historical Financial Information included within Gas Pipeline Operator Part 10 Financial Reporting Template of Epic Energy South Australia Pty Ltd (Moomba to Adelaide Pipeline System Network) for the period 1 July 2025 to 30 June 2026

We have reviewed the accompanying historical financial information included within Gas Pipeline Operator Part 10 Financial Reporting Template (the "Schedules") of Epic Energy South Australia Pty Ltd (Moomba to Adelaide Pipeline System Network) (the "Network") as required by the Australian Energy Regulator ("AER") under Sections 1 through 8 of the Pipeline Information Disclosure Guidelines dated October 2023 (the "Notice") for the period 1 July 2025 to 30 June 2026 (the "Reporting Period") which comprise the following:

- 4. Recovered Capital
- 4.1 Pipelines capex

The criteria (the "Criteria") against which we assessed the Schedules are the accompanying Basis of Preparation.

Management's responsibility for the schedule

Management is responsible for the preparation of the Schedules and has determined that the Basis of Preparation is appropriate to the needs of the directors. Management's responsibility includes establishing and maintaining internal control relevant to the preparation and fair presentation of the Schedules that are free from material misstatement, whether due to fraud or error; selecting and applying appropriate accounting policies; and making accounting estimates that are reasonable in the circumstances.

PricewaterhouseCoopers, ABN 52 780 433 757
Level 11, 70 Franklin Street, ADELAIDE SA 5000
GPO Box 418, ADELAIDE SA 5001
T: +61 8 8218 7000, F: +61 8 8218 7999, www.pwc.com.au

Liability limited by a scheme approved under Professional Standards Legislation.

Auditor's responsibility

Our Our responsibility is to express a conclusion on the Schedules based on our review. We have conducted our review in accordance with Standard on Review Engagements ASRE 2405 *Review of Historical Financial Information Other than a Financial Report* (ASRE 2405) in order to state whether, on the basis of the procedures described, anything has come to our attention that causes us to believe that the Schedules are not prepared, in all material respects, in accordance with the Notice and the Basis of Preparation. No opinion is expressed as to whether the Basis of Preparation is appropriate to the needs of the directors.

ASRE 2405 requires us to comply with relevant ethical requirements, including those pertaining to independence.

A review consists of making enquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Australian Auditing Standards and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion.

Independence

In conducting our review, we have complied with the independence requirements of the Accounting Professional and Ethical Standards Board's APES 110 *Code of Ethics for Professional Accountants (including Independence Standards)*.

Conclusion

Based on our review, which is not an audit, nothing has come to our attention that causes us to believe that the Schedules are not prepared, in all material respects, in accordance with Basis of Preparation as prescribed by the Guideline.

Emphasis of matter - basis of accounting and restriction on distribution and use

We draw attention to Basis of Preparation as prescribed by the Guideline, which describes the basis of preparation. The Schedules has been prepared for the Directors to assist them in complying with Part 10 of the National Gas Rules. As a result, the Schedules may not be suitable for another purpose. Our report is intended solely for the Directors and should not be distributed to or used by parties other than the Directors and Australian Energy Regulators (AER). We accept no responsibility or liability to any party other than the Directors. Our conclusion is not modified in respect of this matter.

Independent auditor's report

To the directors of Epic Energy South Australia Pty Ltd

Our opinion

We have audited the historical financial information and the Basis of Preparation (the "Schedules") within the accompanying Gas Pipeline Operator Part 10 Financial Reporting Template of Epic Energy South Australia Pty Ltd (the Company) - Moomba to Adelaide Pipeline System (the "Network") as required by the Australian Energy Regulator ("AER") under Sections 1 through 8 of the Pipeline Information Disclosure Guidelines dated October 2023 (the "Guideline") for the year from 1 July 2025 to 30 June 2026 (the "Reporting Period"). The Schedules comprise:

- 2. Revenue and Expenses
- 2.1 Profit & Loss by component
- 2.2 Allocation to services
- 2.3 Revenue contributions
- 2.4 Indirect revenue
- 2.5 Shared expenses
- 3.1 Depreciated Book Value
- 3.2 Regulatory Asset Base
- 3.3 Asset useful life
- 3.4 Asset impairment
- 3.5 Depreciation amortisation
- 3.6 Shared supporting assets; and
- the Basis of Preparation

PricewaterhouseCoopers, ABN 52 780 433 757
Level 11, 70 Franklin Street, ADELAIDE SA 5000
GPO Box 418, ADELAIDE SA 5001
T: +61 8 8218 7000, F: +61 8 8218 7999, www.pwc.com.au

Liability limited by a scheme approved under Professional Standards Legislation.

In our opinion the accompanying schedules present fairly, in all material respects, the Historical Financial Information of the Network from 1 July 2025 to 30 June 2026 in accordance with Basis of Preparation relevant to preparing such schedules.

Basis for opinion

We conducted our audit in accordance with Australian Auditing Standards. Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the schedules* section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence

We are independent of the Company in accordance with the ethical requirements of the Accounting Professional & Ethical Standards Board's APES 110 *Code of Ethics for Professional Accountants (including Independence Standards)* (the Code) that are relevant to our audit of the schedules in Australia. We have also fulfilled our other ethical responsibilities in accordance with the Code.

Emphasis of matter - basis of accounting and restriction on distribution and use

We draw attention to Basis of Preparation as prescribed by the Guideline, which describes the basis of preparation. The Schedules have been prepared for the Directors to assist them in complying with Part 10 of the National Gas Rules. As a result, the schedules may not be suitable for another purpose. Our report is intended solely for the Directors of Epic Energy South Australia Pty Ltd and should not be distributed to or used by parties other than the Directors and Australian Energy Regulators (AER). We accept no responsibility or liability to any party other than the Directors. Our opinion is not modified in respect of this matter.

Other information

The directors are responsible for the other information. The other information comprises the information included in the Network's other schedules from 1 July 2025 to 30 June 2026, but does not include the schedule and our auditor's report thereon.

Our opinion on the schedules does not cover the other information and accordingly we do not express any form of assurance conclusion thereon.

In connection with our audit of the schedules, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the schedules or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of management the directors for the schedules

The directors of the Company are responsible for the preparation and presentation of the schedules in accordance with the Basis of Preparation as prescribed by the Guideline, and for such internal control as the directors determine is necessary to enable the preparation of the schedule that is free from material misstatement, whether due to fraud or error.

Auditor's responsibilities for the audit of the schedules

Our objectives are to obtain reasonable assurance about whether the schedules as a whole is free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Australian Auditing Standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the schedules.

As part of an audit in accordance with the Australian Auditing Standards, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the schedule, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates, if any, and related disclosures made by the directors.
- Obtain sufficient appropriate audit evidence regarding the historical financial information of the entities or business activities within the Company to express an opinion on the schedule. We remain solely responsible for our audit opinion.

We communicate with the directors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.
